

getdist.gui.mainwindow.Main
Window.showLikeStats

```
graph LR; A[getdist.gui.mainwindow.Main Window.showLikeStats] --> B[getdist.gui.mainwindow.Main Window.getRootname]; A --> C[getdist.gui.mainwindow.Main Window.getSamples];
```

The diagram illustrates a call to the `showLikeStats` method on a `MainWindow` object. This method then triggers two subsequent actions: calling `getRootname` and `getSamples` on the same `MainWindow` object.

getdist.gui.mainwindow.Main
Window.getRootname

getdist.gui.mainwindow.Main
Window.getSamples
